<TIMOFEY YELIVANOV>

FRONT-END DEVELOPER

I'm a front-end developer with a strong foundation in React, TypeScript, Zustand and modern UI libraries like Tailwind CSS, shadcn/ui, and Joy UI. My priorities are to create a user-friendly product and improve my own skills.

Work Experience

Frontend Developer – AITomaton (Startup)
Remote — 6 months
At AITomaton, I was part of a small, fast-paced team building a web platform to track token prices for AI-related projects. My main focus was building the UI from scratch using React and TypeScript, and integrating real-time data into the dashboard.

- Developed a token tracking dashboard showing average token prices across various AI tools and projects
- Built an interactive table of AI tools, including token price, benchmark scores, and metadata
- Implemented sorting, filtering, and live updates for price changes
- Helped shape product direction by suggesting UI/ UX improvements and new feature ideas
- Worked closely with backend developers and product lead in a startup-style environment

This role helped me sharpen my frontend skills, especially working with dynamic data and UI state management in a real-world product.
